

Lead and Copper Service Line Inventory

In 2024 the City of Buckley developed an initial inventory of service line material type as required by the federal Lead and Copper Rule Revisions of 2021, including both the public and private portions of the service line. The city must publish the inventory and update it as new information becomes available. The purpose is to improve public health by identifying services that may contain lead or if the lead status is unknown with the goal of ultimately eliminating any such service lines on the public side and encouraging customers to replace their side if needed.

Homes and businesses built after 1986 may be designated as not having lead in their service line. Older service line type were determined by researching available records. Customers are asked to review their service line designation here - [Buckley Service Line Inventory](#)

Please verify service line material if known. If any changes need to be made, please email them to bpw@cityofbuckley.com
